# The Virtual Oil Rig – Simulation-based Immersive Training

Jo-Anne Tait (RGU), Colin Hetherington (RGU) & Austin Tate (University of Edinburgh)

The Oil & Gas Institute in the School of Engineering at Robert Gordon University (RGU) in Aberdeen, Scotland has made significant investment in developing methods to ensure its graduates are “industry-ready”. As visits to oil rigs are not often possible or practical for students it was decided to develop a virtual space for students to familiarise themselves with aspects of the offshore environment in a virtual environment. Such simulation tools give students immersive experiences that can increase their desirability to employers.

## Virtual Oil Rig

- Development of semi-submersible rig in 3D Modeller
- Deployment in OpenSimulator (OpenSim)
- Set in ocean environment with sea life
- Moving parts and detailed machinery
- Realistic, loud, 3D sound
- Visitors click on objects for information and linked videos
- Hard hat, ear defenders and boiler suit dispensers for avatars

## Seabed Equipment

- Seabed “Christmas Tree” equipment
- Blow Out Preventer
- Remote-controlled inspection robot
- Diving suit outfit for avatars

## Onshore Campus

- Buildings “onshore” to showcase posters and further educational materials
- Lecture Hall for live streaming events and presentations
- Social areas for staff and students
- Based on the OpenVCE Collaboration Region (open source from OpenVCE.net project)

## Collaboration – University of Edinburgh

- Experimenting with porting the Virtual Oil Rig via the OpenSim OAR Converter to Unity3D.
- Experimenting with porting to multi-user collaborative virtual worlds such as Sine.Space.
- Investigating use in virtual environments designed for immersive experiences using VR headsets.

## Next Steps

- Further integration into taught modules
- Use the Virtual Oil Rig for assessment of key skills
- VR simulations
- Increasing student partnership
